

To Protect the Beautiful Earth

M. K

We are facing a lot of environmental problems now. For example, deforestation, extinction, and air pollution. However, our group thought that global warming is the most serious problem in the world. We had two reasons. First, the ecological system is being destroyed and many animals are losing their habitats. For example, giant pandas, polar bears, orangutans, and African elephants are affected by global warming. Also, there are not only direct effects but also indirect effects if a certain animal goes extinct. Second, climate change will be promoted. It is said that the temperature will rise at a faster rate in the future. Also, the sea level is going up and there are some islands that are in danger of sinking. Moreover, natural disasters, forest fires, the decrease of marshland, the damage to agriculture, and the spread of diseases are expected to increase. Maybe more and more issues will emerge if we don't stop the global warming. To solve the problem of global warming, our group thought of some solutions. We should use our bicycles or public transportation instead of personal cars. This has been said for many years, however, it doesn't seem that there is an improvement. So we must spread this to more people. Also, we can reduce personal cars by limiting them. For instance, we can make a law that prohibits personal cars. We should also make use of the power of nature. Plants can grow by taking carbon dioxide into their bodies. So if we plant more trees and plants around the world, greenhouse gases will decrease and we will be able to stop global warming. Furthermore, we should use regenerated energy, such as nuclear power, solar power, wind power, geothermal power, and so on. It is important not to emit greenhouse gases. There are many causes of global warming like this, but plastic waste also contributes to global warming. This is because plastic is made from oil and it is burned when disposed. This means greenhouse gases are emitted due to the use of plastics. First of all, we should bring our shopping bags and water bottles so we can make sure not to buy plastic bags and plastic bottles. We must do this diligently.

From now on, it is very important to think about environmental problems in order to protect the earth. Some people may think that we have nothing to do with the causes of environmental issues, however, we will surely influence the environment of the earth. We must think about not only the

present, but also the future. I want to try to use environmentally-friendly products and spread the present situation of the earth to many people. I want to protect the beautiful earth.
