

# Technology and Education

A. T

I think technology would improve our education system in many ways. I have two main points.

My first point is that it can improve our learning environment through the use of better quality computers and electronic blackboards. Until I started high school, I rarely had the chance to use a computer for school work. Because of the way society is changing, students need to become more used to using technology in their every day and academic lives. Introducing new technology to our life will give us more chances to get used to it. By using virtual reality and by giving lots of information about how to use it, we can improve the education of students and their interest in learning will grow. Another positive point about online learning is that we have access to information from different sources all around the world. We also have the chance to communicate with people from different countries and cultures. With online learning, distance is not a problem and all we have to take into account are time differences. By being able to learn about different cultures and customs, we open our minds to new ways of thinking and we can share our ideas and opinions with people who may live halfway around the world. Thanks to technology, we can become more internationally minded without even leaving our homes.

Secondly, we will be able to do more online work. It's very easy now for students and teachers to do online classes. We experienced school closures due to Covid 19. However, thanks to online learning, many students were able to continue their studies. Also, it is useful if one lives far from school. I once experienced an online programme from my home in Amakusa. It's so useful because there is no need to go to a place that may be difficult to access. Online is a good and convenient way to learn a new language. One can communicate with a native speaker easily without going to their country. It is also useful if one can record and watch the classes many times, too.

Thirdly, it will be good for people that are physically and mentally challenged. Some people may find it difficult to communicate with other people. However, with new technology developing, it will be possible to communicate by using this new technology. We will be able to find a new way of community life.

Therefore, technology can improve our education system and our lives in many ways. However, there are still a lot of problems and dangers. To solve them, we need to focus on the positive sides of technology and keep in mind to be able to use information in the right way.
